General Safety

The following precautions should be taken before operating Belle Hydraulic Power Units and Road Breaking Tools.

- Read this Operators Guide and the operating handbook for the tool to be connected and run. Observe the manufacturers recommendations.
- b) Never operate the power units and tools without the correct Personal Protection Equipment. Belle recommend the use of protective goggles and/or face shield, ear defenders, protective footwear, gloves, and hand hat.
- c) Ensure that the 'STEEL' is securely locked into the breaker.
- d) Only operate the Power unit in a well Ventilated area ensuring adequate flow of air for the cooling fan and the removal of the exhaust gases.
- e) Ensure that a safe operating work position (Workstation) is selected. Belle recommend that tools are operated at the extremity of the transmission hoses connecting the tool to the power unit.
- f) Ensure that the hydraulic tool is compatible with the hydraulic power supply to be used. It is DANGEROUS to use a hydraulic tool with an incompatible flow rate and pressure.

NOTE:- Hydraulic power units and tools supplied by EHTMA member companies carry range identification labels and it is essential to check that the tools and power unit have the same identification label.

- g) Check the power unit, hoses and tools frequently for damage and/or leaks.
- h) Do not adjust the power pack settings, ie:- the engine speed/flow rate, Relief Valve pressure setting etc. Operating with flows and pressures outside the specifications can be dangerous.
- i) Use only Belle replacement parts. It can Prove dangerous to fit obscure parts.

Never attempt to add fuel or oil when the engine is running. Use only the correct grade, and do not overfill.

Health and Safety

Vibration

Some vibration from the machines operation is transmitted through the handle to the operator's hands. The Belle Group Hydraulic Tool range has been specifically designed to reduce hand/arm vibration levels. Refer to specifications & technical data for vibration levels and usage times (recommended maximum daily exposure time). DO NOT exceed the maximum usage times.

PPE (Personal Protective Equipment)

Personal injury or property damage may be caused by knocks, crushing, slipping, tripping, falling, or by flying chips due mainly to the improper or careless handling of the machine, or working in a confined area.

Suitable PPE must be worn when using this equipment i.e. Safety Goggles, Gloves, Ear Defenders, Dust Mask and Steel Toe capped footwear. Wear clothing suitable for the work you are doing. Tie back long hair and remove any jewellery which may catch in the equipment's moving parts.

Dust

Many of the tools which can be used with this Power Pack can produce dust, which may be hazardous to your health. Always wear a mask that is suited to the type of dust being produced.

Pre-start Checks

1) Ensure that the Power Unit is standing on stable ground or where necessary that it is suitable chocked for stability.

Do not operate the machine at an angle of greater than 20 degrees, otherwise the engine lubricating system may fail, causing extensive damage to the engine.

- 2) Ensure that the engine exhaust is not obstructed and that there is adequate ventilation to disperse the exhaust gases.
- 3) Ensure that the transmission hoses are positioned to avoid damage by vehicles etc., and that they will not be understrain when the accessory tool is in use.

Ensure that the hose couplings to the accessory tool are thoroughly cleaned before ceonnecting. Failure to do so may cause damage to the seals.

- 4) Check engine fuel and oil level, and top up as necessary. Refer to the engine manuals for details of grade.
- 5) Check hydraulic oil level and top up as necessary.

NOTE:- When topping up the hydraulic tank it is advisable to use a strainer. Do not overfill.

Operating Instructions

Starting the Engine

NOTE:- Refer to the engine manual for details. Always ensure the Bypass lever is in the Bypass position.

Petrol Engines

- 1) Open the fuel tap.
- 2) Close the choke on the carburetter.
- 3) Set the engine ignition switch to 'ON'.
- 4) Start the Engine by pulling on the recoil starter rope.
- 5) As the engine warms up, gradually return the choke to 'OPEN'.

NOTE:- Midi and Major petrol Power Packs are fitted with a Power On Demand device and the engine will run at idle speed until pressure is generated in the hydraulic system.

Diesel Engines

- 1) Open the fuel tap.
- 2) Set the engine speed control to the 'START' position.
- 3) Set the decompressor lever to the 'START' position.
- 4) Start the engine by pulling the recoil starter rope.

Operating Checks

Before commencing operation with the accessory tool connected, the following checks should be carried out.

- 1) Bypass lever is in the "FLOW" position.
- 2) Check that there is no excessive engine vibrations.
- 3) Ensure that there are no hydraulic leaks from hoses or couplings.
- 4) Check that the filter condition indicator is not within the clogging sector. When this sector is indicated, the return line filter should be replaced.

Depending on the ambient temperature, optimum performance is usually achieved after 5-10 minutes operation, this is the time required for the hydraulic oil to reach its correct operating temperature.

Stopping the Engine

NOTE:- Refer to the engine manual for details.

Petrol Engines.

- 1) Set the bypass lever to the 'BYPASS' position.
- 2) Set the ignition switch to 'OFF'.
- 3) Switch off the fuel tap.

Diesel Engines.

- 1) Set the bypass lever to the 'BYPASS' position.
- 2) Set the engine speed control to the 'STOP' position.
- 3) Switch off the fuel tap.

EHTMA - Code Of Practice

EUROPEAN HYDRAULIC TOOL MANUFACTURERS ASSOCIATION CODE OF PRACTICE - HYDRAULIC POWER SYSTEMS

Before Starting. Compatibility.

Refer to manufacturer's operating instructions.

Hydraulic Power Systems are designed to operate at a specific Flow and Pressure. Equipment produced by EHTMA members carries a triangular colour coded range identification label. Check that both the tool and power unit have the same identification label before operation. It is imperative that power systems and tools having different colour codings are not interconnected as this practice is both inefficient and dangerous.

For reference the EHTMA colour code is as follows:-

Classification	Colour Code.	Flow 1/min	Max pressure Bar.
Α	Yellow	5.5 – 6.5	180
В	Blue	13.5 – 16.5	172
С	Green	18.0 – 22.0	138
D	Brown	27.0 – 33.0	138
E	Red	36.0 – 44.0	138
F	Black	45.0 – 55.0	138
G	Orange	54.0 – 66.0	138
Z	Grey	9.0 – 11.0	180

If in doubt consult the equipment manufacturer.

Characteristics. Operators not familiar with the use of hydraulic tools should note the following points:-

- 1) Hydraulic breakers are usually more powerful than the equivalent weight pneumatic tools.
- 2) The body of the hydraulic breaker and the supply hoses will become quite warm during normal operation.
- 3) As the breaker has no exhaust it is generally much quieter in operation. This should not be taken as a lack of power.

Safety Points.

- 1) Always wear safety footwear when operating breaking equipment.
- 2) Eye protection is strongly recommended, particularly on hard surfaces.
- 3) Ensure that the 'steel' is securely locked into the breaker.
- 4) Check hoses for deep cuts or exposed braiding; replace any damaged hose.

Service & Maintenance

The following schedule details the attentions considered necessary to ensure satisfactory operation of the power unit.

NOTE:- The attentions and periods summarised in the schedule are the initial recommendations and should be revised to suit the Power Unit working conditions.

Item	Attention	First 50 Hours	10 Hrs	100 Hrs	300 Hrs

System Pressure and Flow Checks

- 1. Connect a suitable hydraulic test unit to the powerpack. The unit should comprise a high pressure flowmeter 0-13.2 gals/min, a gauge 0-200 bar (0-3000psi), a temperature gauge, and a load valve. Suggested unit available from UCC (UC4120).
- 2. Connect the test unit to the power pack with the load valve and the By-Pass lever in the by-pass position and start the power pack. Allow the engine to warm up, set the by-pass lever to the flow position. Close the load valve completely and check that the relief valve setting is correct. The hydraulic oil will tend to get quite hot during this operation and therefore the checking should be carried out as quickly as possible and the load valve opened before excessive temperatures are reached.
- 3. Carefully close the load valve to raise the pressure to 100 Bar (70 Bar for Cub). Check that the flow rate is between 4.8 and 5.3 gals/min (7.4 and 7.9 gals/min for Major 30-140). Adjust the engine speed to give the correct flow. DO NOT EXCEED 3600 RPM (2900 RPM for Major 30-140)"on load". If correct flow cannot be obtained within max engine speed then the pump must be replaced
